

Our NDT Training Courses

Testia has become a reference for training and certification for non-destructive testing. Our training centers across the world provide courses for all NDT methods as well as specialized courses.

Testia Asia Pacific is your local provider of training and examination services in NDT testing, all **in accordance with the EN 4179 / NAS 410 standards**.

We will welcome you in our dedicated state-of-the-art facility – located within the Airbus Singapore Campus – where participants can get their hands on **real parts, components and aircraft structures**. Each course involves a combination of both theory and practical knowledge.

For a better learning experience, we organize sessions with a limited number of participants. Students can therefore benefit from a more personal supervision and are encouraged to interact with our highly experienced trainers.

Upon request, we can also provide **training sessions at customer's site** anywhere in the Asia-Pacific region (provided that appropriate equipment is available on site and an audit performed by the examiner in advance).

We also offer **level 3 services** including: responsible level 3 services, procedure writing, consultancy and audits preparation.

If you wish to register for any of the courses, **please send an email** with:

- Chosen training session
- Number of attendants
- Name of the trainee(s)
- Trainee's contact details

Scheduled Courses 2022

Eddy Current Testing Level 1 & 2
22 Aug – 02 Sep 2022

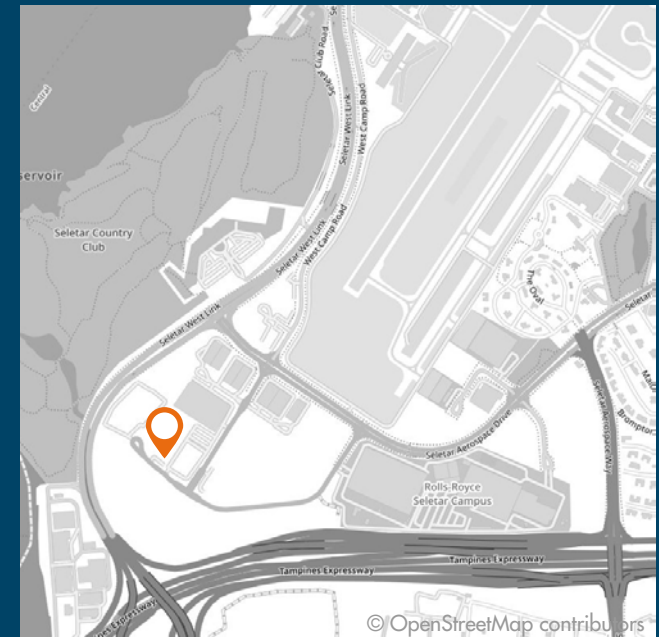

ET

Ultrasonic Testing Level 1 & 2
21 Nov – 02 Dec 2022

UT

NDT method awareness
12 – 14 Sep 2022
02 – 04 Nov 2022

NDT
